
q = 50
q = 60
seed 80502
stage 1 mean effort $e_1(0)$
stage 2 mean effort $e_2(d)$
stage 3 mean effort $e_3(d)$
stage 2 state-visitation distribution (mass per node)
stage 3 state-visitation distribution (mass per node)
score gap d
closed-form equilibrium (stage 3)
learned mean effort (one line per run)
median over the 40 runs
seed 80502 (failed run)
10-90 % band over the 40 runs
tie point ($d = 0$)
stage 1: a run's $e_1(0)$
stage 1: median over the 40 runs
stage 1: seed 80502 (failed run)
positive-effort region ($|d| < 2q$ at the terminal stage)
theoretical zero-effort tails ($|d| \geq 2q$ at the terminal stage)
